

CYBERSECURITY CASE STUDY:

OFFERING 24/7 ACCESSIBILITY AND PROTECTION TO AN ORGANISATION IN THE FINANCIAL INDUSTRY

Customer

Our Client was in need of a security partner that was compliance-driven and had an expert knowledge and understanding of appropriate industry regulations. They chose Smarttech247 because of their experience in delivering end-to-end security services to enterprise organisations in the financial sector.

Industry Challenge

As the client reviewed their overall security, they realised that they weren't satisfied simply checking off the "compliant" checkboxes and wanted something more robust and secure.

The customer was lacking the internal resources necessary not only to bring them to compliance, but also to monitor their network and react to incidents as they happened.

The Solution

Recognising the unique IT challenges in the financial services industry, Smarttech247 proposed the implementation of enterprise-grade security solutions (including SIEM, EDR and more) wrapped around a 24/7 managed service to ensure full visibility across networks, real-time monitoring and fast incident response.

The Smarttech247 managed security service solution protects the customer's company sites around the world. Smarttech247 deliver incident management services and ensure the client has an IR plan in place in order to prevent any downtime. Smarttech247 also ensured the clients smooth shift to remote working due to the pandemic.

ABOUT SMARTTECH247

Smarttech247 is a leading cybersecurity and managed security services provider focused on threat detection and response. Offering a comprehensive portfolio of managed security services, consulting and compliance services, Smarttech247 helps global businesses embrace digital transformation securely.
